
Digidoc Open-EID - Installation instructions for Debian 9 Stretch

Release 1.0.0

Jens Getreu

Mar 16, 2017

Contents:

1	ID-software – what’s this?	1
2	Installation	1

This note shows how to install the [Estonian Electronic Identity Software](#) on Debian 9.

1 ID-software – what’s this?

ID-software allows you to use your ID-card electronically – use private and governmental e-services, digitally sign documents and encrypt documents for safe transfer.

During ID-software installation 3 programs are installed into your computer: ID-card utility, DigiDoc3 client and DigiDoc3 crypto.

With ID-card utility you can check the functioning of your ID-card and certificate validity, change PIN and PUK codes. The ID-card utility window displays the ID-card owner’s data and ID-card validity data. This information is constantly visible when ID-card utility is running. ID-card utility enables you to perform actions with certificates (extend them, change and unblock PIN codes and PUK code), configure @eesti.ee email address.

2 Installation

1. Download the installer [script](#).
2. Edit the script
Replace:

```
case $codename in
wheezy)
    add_repository trusty
*)
    make_fail "Debian $codename is not officially supported"
    ;;
```

With:

```
case $codename in
wheezy)
    add_repository trusty
    ;;
stretch)
    add_repository yakkety
    ;;
*)
    make_fail "Debian $codename is not officially supported"
    ;;
```

3. Download [libssl1.0.0](#) for your architecture (scroll down)
4. Install *libssl1.0.0*:

```
sudo dpkg -i libssl1.0.0_1.0.1t-1+deb8u5_amd64.deb
```

(your exact package name might be different).

5. Run the modified installation script:

```
./install-open-eid.sh
```

Note: The [source code](#) of the Estonian ID software is hosted on Github.
